Professional Summary

Senior full-stack software engineer with 9+ years shipping production web platforms, browser extensions, e-commerce integrations, and AI-assisted workflows. Built Shopify warehouse tooling, GPS subscription checkout systems (Stripe, WooCommerce, telematics APIs), and computer-vision media automation pipelines. Most recently at Ezoic: Go microservices on AWS, Vue/TypeScript platform migration, and multi-agent CI/CD orchestration that reduced rendering times 10x.

Technical Skills

Languages: **TypeScript**, **Go**, JavaScript

Frontend: **Vue.js**, React, WebGL, Canvas, component-based library design

Backend: **Node.js**, REST APIs, OpenAPI-first contract design, FastAPI, PostgreSQL, MongoDB, Redis

Integrations: Shopify, GraphQL, Stripe, WooCommerce, Recharge, Chrome Extensions (MV3), Playwright, LangChain

Infra and Cloud: Docker, AWS (ECS, SQS, Lambda, CloudFront, S3, CodeBuild)

Practices: Agile, Scrum, CI/CD, AI-assisted development

Professional Experience

Freelance Software Engineer

Self-employed | Remote

Concurrent contract engagements alongside full-time employment.

- Architected Shopify OS 2.0 theme with metafield-driven PDPs and ritual-quiz personalization, plus a Shopify Admin GraphQL MCP server with centralized OAuth, enabling AI-assisted catalog changes and reducing manual merchandising effort.
- Built warehouse platform (React, Node.js, MongoDB) integrating Shopify Admin, Recharge, Twilio SMS, and showroom SKU APIs to connect floor inventory with e-commerce, improving pick accuracy and VIP client fulfillment speed.
- Shipped vehicle-compatibility scanner using Playwright rendering and a two-stage LangChain LLM pipeline on Dockerized FastAPI; designed MCP-orchestrated generative ad workflows with JSON Schema validation for DTC creative production at scale.
- Developed Chrome MV3 extensions for platform progress tracking with Cortex API session reuse and Amazon analytics automation to Google Sheets.

Senior Software Engineer

Ezoic | Remote

January 2022 to April 2026

- Built multi-service Go backend on AWS (ECS, SQS, Lambda, CloudFront) with asynchronous operation farms that reduced video rendering times 10x for an AI content generation platform operating at production scale.
- Delivered end-to-end AI video generation platform orchestrating autonomous content creation across distributed services and async worker pipelines.
- Led migration of a large frontend codebase to Vue.js, TypeScript, and Vite, improving build velocity and type safety across production user surfaces.
- Designed multi-agent async workflows for content generation, automated code review, QA, and deployment integrated with CI/CD pipelines.
- Established OpenAPI-first contracts between frontend and backend teams, standardizing API design and reducing cross-service integration defects.
- Drove roadmap prioritization from platform and market analysis; shipped production-ready features daily using AI-assisted and agentic validation workflows.

Chief Technology Officer

Thobias.com | Remote

January 2021 to January 2022

- Owned engineering end-to-end: business-aligned technical goals, staging and production environments, code review gates, and cross-team direction for a DTC fashion brand scaling e-commerce and content operations.
- Built CLI pipelines using MediaPipe Pose, OpenCV, and scikit-learn to ingest fashion photoshoot burst folders, classify front/back views from pose landmarks, cluster similar model poses, and export curated representative images, replacing manual culling with 90% categorization accuracy for Thobias Models.
- Automated catalog image post-production with pose segmentation and landmark-driven cropping (ankle and full-body modes), batch color normalization via HSV clipping and adaptive brightness enhancement, eliminating per-image manual crop and color grading before e-commerce upload.
- Converted landscape runway footage to mobile-ready portrait video using two-pass MediaPipe pose analysis, hip-tracked lerp panning, and timed zoom-out framing, producing consistent social-ready clips from raw photoshoot video without manual editing.

Full Stack Developer

Nutrargroup Holdings | Remote

August 2018 to January 2021

- Built end-to-end GPS activation platform in PHP, connecting multi-processor checkout (Stripe, ReCharge, Authorize.Net, WooCommerce) through IMEI validation to automated Wialon telematics provisioning, enabling subscription purchase to fleet onboarding on a single API host.
- Delivered Node.js HTTPS customer self-service portal with MongoDB, role-scoped sessions, and PodGroup/Wialon integrations so fleet customers could activate devices, manage subscriptions, and update account settings without support handoffs.
- Shipped embeddable single-page checkout widgets for Stripe/ReCharge, WooCommerce, and Authorize.Net paths using client-side tokenization, Google Places autocomplete, and user-facing API orchestration, avoiding checkout redirects on high-converting GPS subscription funnels.
- Wired full-funnel conversion tracking across checkout widgets with Facebook Pixel, Google Ads gtag, and affiliate pixels tied to charge_id transaction IDs, giving marketing teams attributable purchase signals from reveal through payment completion.

Software Engineering Intern

PactSafe (now IronClad) | Broad Ripple, IN

May 2018 to July 2018

- Migrated production application modules from RequireJS to React within agile sprints, participating in code reviews, Git workflows, and performance benchmarking on enterprise production code.

Full Stack Developer

Nutrargroup Holdings | Remote

June 2017 to May 2018

- Built Node.js REST APIs and Pulse Miner, a scheduled Chrome extension that chained Amazon review extraction, BSR scraping, Nutrargroup rankings, and diff-tracked review-count reporting across ten regional marketplaces via Web Workers and Google Sheets, driving competitive intelligence without manual analyst hours.
- Developed product image scraper using Chrome MV2 with HTTP proxy rotation and batch Google Sheets export to capture full-resolution gallery metadata, leveraging real browser DOM interaction and self-healing retries to sustain high-volume catalog ingestion.
- Architected Chrome extension with MV3 foundation in TypeScript with MutationObserver-driven listing capture, Webpack multi-entry builds, and a side-panel dashboard to monitor platform sales data inside authenticated sessions instead of brittle headless automation.

Education

Salesforce Certified AgentForce Specialist

In Progress

Bachelor's degree in Computer Science

Indiana University-Purdue University Indianapolis

August 2016 to May 2020
